SUMMARY

Computer Engineering student at UBC seeking Software Engineering internships. Full-stack experience shipping production features alongside independent project work building Huntr, a real-time multiplayer mobile game.

EDUCATION

The University of British Columbia
Bachelor of Applied Science in Computer Engineering

Vancouver, BC
Aug. 2024 – May 2029

EXPERIENCE

Software Engineering Intern/Contractor

Jan 2026 – Aug 2026

Wygo

Toronto, ON

- Created a marketing analytics tool that tracks where users drop off in the checkout pipeline using PostHog events, visualizing the data using a sankey chart with Recharts
- Built the checkout flow and stripe webhook handler for an event bundle feature, shipping on a tight deadline ahead of a major customer's event release
- Restructured payment pipeline to support coupons that apply on a per-ticket basis, allowing hosts to target individual tickets rather than applying flat order-wide discounts
- Integrated Google Maps Places API into the event creation form to add event location auto-fill and an attendee-facing map preview, reducing errors in event info and improving the attendee experience
- Shipped ~40,000 lines of code across 43 PRs containing new features, improvements, and bug fixes

Undergraduate Teaching Assistant

Jan 2026 – Apr 2026

UBC Computer Science

Vancouver, BC

- Delivered weekly lectures on C programming and embedded systems (Arduino) to 50+ students, reinforcing core concepts prior to weekly exams
- Moderated a student question forum, facilitating peer collaboration, providing clarification when needed
- Evaluated midterm and final exams, providing students with detailed feedback to support their learning

Business Support Summer Student

May 2025 – Aug 2025

TAQA North

Calgary, AB

- Worked on IT Projects such as Mineral File Scanning and Notice of Assignment File Cleanup, handling over 22,000 files to enhance company data integrity
- Collaborated with Office Services by distributing mail, performing inventory control, and office organization

PROJECTS

Huntr

Oct 2024 - Present

Large Scale Manhunt Game System

- Built a real-time location based multiplayer game using Expo, React Native, Next.js, and Supabase
- Managed a team of 1 designer and 2 developers, coordinating product development, ensuring features got shipped in time for major events
- Created a native application with background location tracking, on-demand notifications, and a map central interface
- Collaborated with external UI/UX designers to create a simple and user-friendly player experience, translating Figma mock ups into a working product
- Built a web based admin dashboard with live location updates and border visualization all centered around a single map based interface
- Organized and operated large manhunt events at UBC with up to 300 participants

MustDance

Nov 2025

Just Dance Generator and Grader

Hack Camp

- Built a Just Dance clone that generates dance videos and grades a user's performance using pose estimation
- Used Librosa for beat detection and video stitching, syncing generated dance clips to song BPM
- Implemented pose estimation grading with OpenCV/Mediapipe with normalized landmark positions
- Created a frontend interface using React where users could upload a song and take a video performing the dance

TECHNICAL SKILLS

Languages: Typescript, Java, C, Python, PostgreSQL

Frameworks/Libraries: Next.js, React, React Native, Node.js, Playwright, JUnit

Tools & Platforms: PostgreSQL, Supabase, WebSockets, AWS, Git
